

Could You Benefit from a 3D Printing Service?

3D Printing services from Kraftwurx allows you to create 3D models, replicas and even consumer products in a fast and affordable way. There are countless benefits of prototyping services. Our team of specialists can help you discover ways to get superior results with 3D printing over more traditional manufacturing methods. In many cases you'll realize significant cost savings, faster turnaround and the ability to test multiple designs at once.

In what situations does a 3D printing service provide benefits?:

- **Large products you wish you could take on the road with you?** If you produce large and complex machinery, equipment or other parts at your company, it can be difficult to convince potential customers to buy without demonstration. They want to see and feel the product before they buy it, and that's just not possible with very large products. Fortunately, with a 3D printing service, you can create working small-scale replicas and models that can easily be transported. Take them on the road to sales calls, pitch meetings and more, and let your customers see and handle the product to help with their decision.

- **Do you want to test and perfect your product?** Many companies produce prototypes as part of the design process. Unfortunately, with traditional manufacturing methods, prototyping can take too long and be too costly. Prototypes from a 3D printing service create parts quickly, affordably and with little to no hassle, saving valuable time and resources so you can focus on perfecting your products.

If you answered yes to either of these questions, then your business could definitely benefit from a 3d Printing company. Contact Kraftwurx today at 281-256-9737 to discuss your needs, or log onto our 3D printing community now.
