

resin?

Posted by Silverbeam - 2012/02/04 01:24

do you offer any resin materials? And if not anytime in the near future?

The closest thing to resin we currently offer are the objet vero materials. New materials are being added gradually. We do plan to bring on many of the Envisiontec resins. With that said you may also contact us directly for unique materials and special order requests. Just let me know what you are looking for specifically.

That's cool....

I make 3D printed ball jointed dolls, and they are usually all made out of resin. It would be nice to be as close to the "real" thing as possible while staying affordable. On shapeways it costs about 30-40\$ To print my tiny dolls in their cheap, WSF. material. I will have to take a look at what you guys do.

Is there a material sample kit that we can order?

That material is most likely that same as our PA 2200. Other material options for your dolls would be Durus white or Sub-surface vero grey.

Please stand-by. I will see about a sample kit that includes these materials.

it would be nice to get a good general sample set as well.

But anything close to resin I would like to see.
