

## Printing soft PVC plastic material

Posted by andradebh - 2013/01/28 13:00

---

I am looking for a rapid prototype made of PVC plastic material. (very soft material)

Is there any company available to provide this service?

Hello Andradebh,

Unfortunately PVC is not a widely adopted 3d print material. Although some rudimentary and experimental 3d printers do use PVC, it is not currently available in market/retail quality.

The best option is ABS plastic. What properties are you looking for in PVC? Perhaps there is another 3d print material that can suite your needs.

I am looking for softness and flexibility. The PVC material I mean looks like rubber or silicon.

Oh! Yes we offer flexible black, clear and grey. We can also control the durometer of the flexible black. From shore hardness of 27 to 95.

This material in-site is Vero Black Flexible., and Amber Clear Flexible. Let me know if you have any questions about modeling for these materials.
