Water Clear (WaterShed) Support Material
Posted by Brandroid - 2014/07/08 11:10

_____

Is there a support material used in the DSM Somos WaterShed process? I'm particularly interested in how a negative space will appear inside a solid print. For instance, if I model a cube with a negative space suspended inside (say the letter "A"), will this negative space be truly empty, or will it be filled with a support material of some kind?
