

200 MB Upload Limit

Posted by Marco CM - 2013/04/02 17:38

In the world of creative 3d modeling, large file sizes are not uncommon. Especially when it comes to the high polygon ZBrush, Mudbox, 3D Coat and Sculptris models. Unlike some of our competitors with wimpy 64 mb file upload limits, the team here at Kraftwurx understands the demands of serious 3d modelers and engineers require at least 200 mb file upload limit. We wish to make the 3d printing experience on Kraftwurx as limitless and as enjoyable as possible. For this reason we allow 3d model files in either .stl, .obj, .wrl. or .dae format up to 200 MB in file size. This opens up the door of 3d printing to your figurines, professional jewelry, and true engineering parts. Try out the 200 mb upload limit today and print something seriously cool with all the detail you want.
