

How to fix unable to send and receive email in Thu

Posted by AjexMartin - 2020/07/02 02:05

Thunderbird users often find it difficult to send or receive emails because the settings they are using are incorrect. You can refer to the steps below to review the settings and fix the problem:

- Step 1: Go to the Account Settings and review your SMTP outgoing email settings and then try and send your emails again.
- Step 2: Go to the Firewall settings on your PC and ensure your outgoing email is not being blocked.
- Step 3: Switch off your antivirus software and disabling the firewall before sending out an email using Thunderbird.

If you find that you still encounter email errors even after you implement the steps mentioned above you can call the Mozilla Thunderbird support number and ask for help. Read more for: Comcast email phone number

Due to technical problem your yahoo account is unable to load emails. You also trying lots of time to fixed these kinds of issues yourself, but due to technical issue you not able to resolve these issues. At that condition you need to contact with Yahoo customer service number and get your yahoo account error free instantly.
