How do I 3d print a full color model on Kraftwurx?
Posted by Marco CM - 2014/05/15 14:34

_____

1. Ensure your 3d model has assigned UV coordinates and a corresponding color image texture map. Limit one (1) UV map and corresponding image per model file.

2. Upload the 3d model in .OBJ file format to Kraftwurx.com using the "Upload A Model" button found on the home page.

3. Inside the Model Editor loads the model choose Multi-Color Sandstone as the 3d print material. Click the checkaerd ball inside the Finishes box in order to select and upload your 2d color image texture file. Accepted image file formats: .PNG, .JPG, .BMP.
