

## Help! Shrinkage Level of Platinum E-Ring !

Posted by Mayforever - 2015/06/05 19:02

---

I need help on the details for shrinkage ( if there is ? ) for creating an engagement ring

Anyone has an idea? :S

For jewelry design, does anyone increase / decrease certain area of the ring so to avoid this? Or the shrinkage level is negligible?

What I know to avoid thinner size for support. I've designed not lesser than 0.8 mm, is that sufficient ?

Hope to get help from anyone, thanks in advance!

I am looking for this information for the same reason. Is there any shrinkage to be considered during designing. And if there is for platinum, is it identical to the shrinkage for using white gold?
