

Fits and materials

Posted by partapart - 2016/02/28 15:44

Hi guys,

I have two questions:

In the product I'm designing for 3D printing I need to achieve (or, sort of, simulate) engineering fits of H/f on one pair of cylinders and H/p in the other pair of cylinders. Is this possible?3

Also, is there a material that would provide a polished metal (aluminum, steel) look and feel of a product?

Thanks

=====
