Why a Roku device?

You discovering Roku might be a great chance to get rid of the traditional cable and dive into your personal world of entertainment. The vast and diverse platform that the device sports, simple UI that compliments the streaming capabilities, the fluidity of the software, the cost factor of the device and a lot more makes this a beast of a device.

The channel selection of the service is vast and handpicked. This filters all the filler content and puts the necessary ones on the list. You can still customize the channels on your home screen accordingly.

The service is designed in such a way that, you just pay for what you see. If you feel like you don't use the cable that much, you should consider getting a Roku. Most of all, the factor that influences most of the customers is the fact that there is a Roku product for everyone. You can get a high-end futuristic model and also a basic version that strips off all the luxury from the product. But neither of them compensates for the efficiency and the performance of what it does. Simply visit [Roku.com/link](https://Roku.com/link) to activate your Roku account.

Setting up of a Roku device can be simple, provided you've all the ingredients sorted out. Simply try to be calm while performing your setup so there is no window for errors during the process.

Follow the steps below to complete the Roku device setup using [Roku.com/link](https://Roku.com/link)

Unbox the streaming device from the package and layout all the necessary cables before handed.

The idea is to connect the Roku streaming device to the TV and then your device to the wall socket.

There are two different inputs available on the TV.

HDMI

Composite cables

You can use either of these methods to connect the streaming devices to the TV.

Just make sure you choose the right ports to connect the device.

If you are using a 4K streaming device then you need an HDMI 2.0 port that supports HDCP 2.2

If you are using an older TV, then simply connect the composite cables to the appropriate ports.

As different devices support different modes of connection, make sure that you choose one according to your TV.

Once you connect the streaming device to the TV, connect the device to your wall socket using an adaptor.

Power the devices.

Now, select the right input on your TV to launch your Roku device.

Once you see the Roku logo on your screen, you can identify that the initial setup is successful.
