How to Upload Models to Kraftwurx
Posted by Marco CM - 2012/04/27 10:04

_____

Kraftwurx has put together a small video on Uploading models for 3d printing. Our Home page Upload button allows you to select a model file, upload it, chose a material and set the scale of your 3d print model order.

 The Model Editor calculates the price for the product in the chosen material at the chosen scale and gives you the option to place an order for the 3d print. The Model Editor will notify you in Red text when a model is set to be too small to for the chosen material. You then have the option to scale the model up or possibly choose a different material capable of 3d printed very small objects. Such as the Nano-Detail family of materials. Please watch the video linked below.
