

Why so expensive??

Posted by Lucas - 2013/02/18 08:15

Hello,

Why the prices for my models are so high? Small, simple models, material used Nano Detail High-Temp HD.

Hello Lucas,

Please check and make sure the proper units of scale are set by clicking either the "mm" "cm" or "inches" buttons in the Model Editor. For example: If the model is intended to be 50mm tall, yet inches are selected. The Model Editor will calculate the price for a 50" inch tall model.

The Nano-Detail materials are designed for small to medium size models. Extremely large models will be very costly. Can you tell me how large you intend to 3d print this model?

Hello,

I only uploaded my model and didn't touch anything and here's the result:

Price looks like a 21 thousand \$, but maybe I am wrong and this is 21 \$??

Then I only changed material and price for Nano Detail High-Temp grows to 266 \$ per 1 in3

What is the scale you intend to 3d print your model at? How large?

I can see in the screen shot that the "in" button is clicked in the scale units. Please click on the "mm" button in the scale tool. This will set the proper scale for your model. Right now the Model Editor thinks the model is huge!

Make sure to click "mm" button , then the price will calculate correctly. This should fix the problem.

OK, thank you for your help.

One more question, is this correct price on screenshot? \$16,23 per cm3?

Hello,

Yes this is the correct price for a tire model that size in Multi-Color Sandstone material.

Re:Why so expensive??

Posted by Lucas - 2013/02/19 12:31

But this is Nano Detail High-Temp material and after calculation it should to be \$78,53 not 84,54.

Ah, yes sorry I intended to say Nano-Detail High Temp.

Everything is correct in price now,.
