

## Gallery of Printed objects?

Posted by mash3d - 2013/04/07 20:26

---

Hi, I took a look at several objects but I didn't really see a gallery of objects after they have been printed at at what settings.

For example the printed object next to a Quarter.

Is there anyway you could do a blog post that shows various objects, some high detailed, some showing some large smooth surfaces, and various print settings and scales? Also can you list the real world print scale and the printing cost?

Thanks,

Michael

Hello Michael,

We offer a super wide selection of materials to 3d print with. All vary in detail and appearance. Could you tell me what materials you are interested in or perhaps what types of 3d models you would like to 3d print? I can then show you photos and images of the relating materials.

I'm looking at printing figures for a master casting.

So it will most likely be something like smooth plastic.

The Figures will be around 2.25 inches tall to 4.5 inches.

Thnaks, Michael

Hello Michael,

We offer the best materials for creating figurines. Both medium size figurines and tiny ultra-detailed figurines. Sub Surface VeroWhite is a great material for medium-size figurines. (2"-5" tall). It produces smooth surface using UV cured acrylic resin. Ideal for figurines.

The second is Nano-Detail High Temp. This produces models with details down to 15 microns! Although you can 3d print large models with it, the material is super highly detailed and ideally suited for 28mm scale war gaming figurines.

Is this an Objet 3d machine print??

Thanks
