

## 3D Printing external handgun parts?

Posted by Bryce - 2011/11/18 16:39

---

Would it be "In the kraftwurx spirit" to produce external pieces to handguns (that would be non-operational of course) such as pistol grips, trigger-guards, rail systems, or flashlight mounts? These parts would be attached to the handgun, but wouldn't be operational. Is this allowed?

=====

Kraftwurx can produce "legal" items for guns. Things like Grips and stocks as well as artistic hammers and slides are possible.

We cannot actually print weapons and unfortunately will not print anything questionable.
