

## Pricing question.

Posted by akvaro - 2012/02/01 18:25

---

I have a  $56\text{cm}^3$  model and when i upload it the system says that the price for black plastic is 48\$, this makes  $\sim 0.85\$ \text{cm}^3$ , and in the description of black plastic says  $0.31\$ \text{cm}^3$ , so my question is, am i missing something? :huh:

Edit: Ok, the 48\$ is MSRP, where 12\$ are my profit if i sell it, and i suppose that in the remaining 36\$ there must be some fee, am i mistaken?

The MSRP is made up of both production costs, material costs and a standard %30 profit for the seller. Sellers may change their profit percentage in the profile settings. In the materials page, those prices do not include a %30 profit for sellers. Does this answer your question Akvaro?
