

Neat video over printing stainless steel

Posted by Waldo - 2011/11/08 14:18

This video shows the complete process of making a stainless steel 3D print. The video is pretty intricate; I thought it was interesting.

Stainless Steel 3D Print

This is not metal 3d printing. This is creating a sand casting using a pro metal printer. Actual 3d Printing in metal would be DMLS, EBM or SLM.

You can check out a cool video and look a lot about it here.

Additive Manufacturing using Direct Metal Laser Sintering (DMLS)
