

Needing a prototype

Posted by beeboy - 2013/08/06 21:07

I have built a bee hive feeder that I am interested in seeing if a part of it might be a good candidate for 3D printing. The piece is now made of wood and wire mesh. Would it be possible to make it all in one piece on your 3D printer, and any idea what it would cost me? I am not interested in doing it myself just looking to purchase the finished piece. If it proves to be a usable piece I would be interested in ordering lots of 20 or 30. See the attached photo. Size is approximately 7" x 4" x 3". You may contact me via email as I don't follow this forum.

Thanks so much,

-Jerry
