

Choose your native language i.e. the language you would like all your conversations to be translated to.

Once you select a language, all incoming conversations will be automatically translated to your language.

e.g. Alex selects English as he only understands English.

### Real time translation

While chatting with another user, if the user types in a language other than yours, it will automatically be translated.

e.g. Donald is typing in Spanish, but since Alex's language is set to English, Donald's messages are being translated to English on-the-fly!
